FCTUC contributes to the development of Robotic Hands of the Future

Create a robotic hand with smart anthropomorphic features - able to identify and manipulate all sorts of objects, as if it were a human hand - is the ultimate goal of an ambitious European project in progress, HANDLE, incorporating a team of researchers from the Institute of Systems and Robotics (ISR) of the Faculty of Science and Technology, University of Coimbra (FCTUC). The magazine Exame Informática highlights this research.

Exame Informatica - Maos Do Futuro
